# Trusted Station

Streamlining B2B Integration

12/11/2024

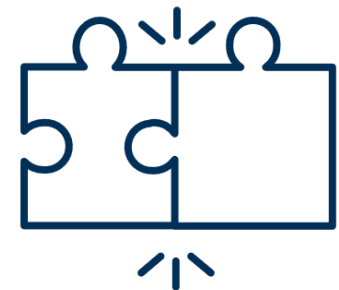

# Overview

Trusted Station enables seamless access to Intesa's B2B services via the Trusted Hub platform.

Compatible with several Windows™ versions, it ensures a smooth transition for users of the legacy EDISTATION+/WIN system. This solution integrates key functionalities under a unified graphical interface, offering a simple yet powerful tool for managing data exchange.

Built with a modular design, Trusted Station V1.0 offers scalability and flexibility, allowing businesses to easily adapt and expand their systems as needs evolve. It supports both interactive and batch processing modes, ensuring comprehensive functionality for various business scenarios.

# Key Features for Efficient Data Exchange

1

Trusted Station supports major messaging standards such as EDIFACT and ODETTE, enabling **compatibility** with diverse business partners. The system includes preconfigured messages for rapid deployment and can handle both individual documents and entire batches of data.

2

The platform ensures **full traceability** of documents throughout the translation and transmission process. It also provides a robust error-handling mechanism, allowing for document rejection in cases of syntax issues, minimizing disruption

3

Trusted Station can be used with the optional **Ediautomation module**, automating the translation, transmission, and reception of documents for further efficiency.

# Reliable Scalable User-Friendly

Trusted Station offers a reliable and scalable solution with clear hardware and software requirements, including IBM-compatible PCs with a Pentium II or higher processor and 100 MB of free hard drive space.

It supports all major Windows™ operating systems.

The system provides comprehensive communication capabilities, requiring HTTP/HTTPS access to Intesa's Business Collaboration platform.

In addition to core functionalities, Trusted Station includes built-in support features such as an on-line help system, database management tools, and remote support capabilities to ensure smooth operation and long-term success.
